ORDER EARLY. We aim to execute all orders as soon as received, but during the rush season from March to May and again from July to September, slight delays are unavoidable, which however, can be largely overcome by customers anticipating their wants and ordering and taking delivery of their requirements early.

SAFE ARRIVAL OF PACKAGES. We guarantee the safe arrival of all goods sent to points within the United States.

TERMS. Cash with order, personal check or money order. Stamps are acceptable in payment of small orders. We cannot ship C.O.D.

PREPAID. All prices quoted include delivery by prepaid Parcel Post or Express, EXCEPT ON PLANT AND BULB ORDERS LESS THAN \$3.00. On these small orders kindly include 35c for packing.

SALES TAX. Washington residents must include 3% sales tax with remittance.

NON-WARRANTY. Most of the failures with seeds, plants and bulbs are due to causes entirely beyond our control, such as unfavorable weather or soil conditions, too deep or too shallow planting, etc., which renders it impossible for us to guarantee success, and although we take all possible care to supply only such goods as will, under proper conditions, produce satisfactory results, we will give no warranty as to description, quality or productiveness of any of the seeds, plants or bulbs we send out, and will not be in any way responsible for the crop, and every order for articles named in this catalog will be executed on these conditions only. It must, however, be plain to everyone who gives the matter the slightest thought that it is to our best interests to send out only such stock as will not only grow, but prove true to name and description.

PERENNIAL FLOWER SEEDS

HARDY PERENNIAL FLOWER SEEDS

ALL FLOWER SEEDS SENT POSTPAID
NO SEED ORDER FOR LESS THAN 25c PLEASE

PLEASE NOTE!

 All seed packs contain a liberal amount of seed. If you have a large garden, the most economical way to buy seeds is in bulk; 1/16 oz. and up, where so quoted.

In comparing competitive prices be assured that you get fewer and often inferior seed at the lower prices.

To grow high grade seeds takes more care and skill, and costs more money, but it certainly pays in the end to buy only such seed. This refers particularly to Delphinium, Columbine, Primroses, Pansies, Sweet Peas and Zinnias.

Of course the seeds must be fresh, and be assured ours are. Buying old or inferior seeds is a waste of money and time. No seed order for less than 25c, please.

AUNT MARY'S SWEET CORN

We offer this grandest and sweetest of all Sweet Corn on the market.

ORDER EARLY. There is never enough to fill late orders.

Never was sweet corn that tasted as sweet. It will stay in good condition for table use for two or three weeks. It stays in milk so long that natural ripening is impossible; ears that were ready for table use in October were still in milk when hard frosts killed the plants in November.

BY ALL MEANS GIVE THIS SWEET CORN A TRIAL THIS YEAR AND YOU WILL COME BACK FOR MORE NEXT YEAR. Make your first planting during May two weeks apart; make another one the second week in June, another the last week in June, and the last planting the first week in July, and this will furnish you sweet green ears until early October.

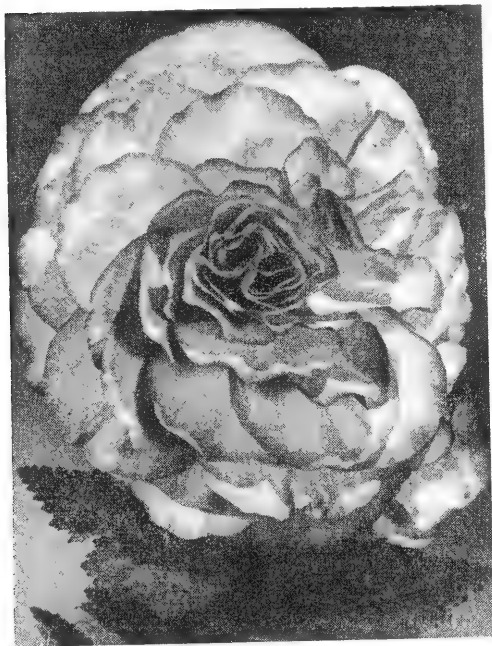

We have had reports from customers having the ears table use for Thanksgiving. They had made late plantings of seed in June and July.

Per pkt. 25c; 3 for 70c; 1/2 lb. 80c; 1 lb. \$1.50.

BEGONIA CULTURE

The dormant period of the tuber is in the winter, and in the spring the tuber will form sprouts. We therefore discourage too early delivery, being convinced that if started a little later they will start quicker and prove far more satisfactory.

IT IS OF THE UTMOST IMPORTANCE THAT A SPROUT APPEAR BEFORE THE TUBER IS PLANTED.

You may move your tubers to a warm, dark place to induce earlier sprouting. Placing un-sprouted tubers in damp soil or peat moss is not advisable as they will sprout without dampness, with less danger of loss.

The sprouted tubers should be placed in shallow containers in a mixture of leaf mold and sand, or of finely divided peat. Cover tubers completely, leaving only the tips of the sprouts showing, as the roots develop from the top and sides of tubers. After planting the tubers should be well watered and should not be watered again until they show dryness. It is important that the tuber develop a good root system before potting, or setting out in your garden. They may attain four or five inches before they are moved.

After planting the plant is lightly watered and is not watered again until the soil shows dryness. As the plant develops, watering will become more frequent; however a simple rule is to WATER ONLY WHEN THE SOIL SHOWS DRYNESS.

Picotee Ruffled Type

This type is remarkable for its contrasting colors. They resemble the camellia type in formation but the flowers are daintily edged or heavily bordered with a contrasting color. They may also be strikingly mottled or spotted.

DAHLIA CULTURE

Dahlias thrive in any good garden soil which is well drained. Compost or well rotted cow manure will add desired humus to the soil, but DO NOT allow the manure to come in direct contact with the tubers. They like a sunny location and water only when the ground is quite dry and then soak it thoroughly.

Plant when danger of frost is past; and set a stake beside each tuber. Plant tubers horizontally with "eye" or sprout facing up, from 4 to 6 inches deep.

ANEMONES

Be sure to plant pointed end down. Where there is danger of freezing. ANEMONES AND RANUNCULUS must be planted in very late Winter or Early Spring. Sunny location is best. Soak 2 or 3 hours in water before planting.

TOP SIZE BULBS

MONARCH DE CAEN. A magnificent and robust strain of poppy anemone. Huge saucer shaped flowers in brilliant shades of pink, red and blue. **Doz. 60c; 100, \$4.75**

SEMI-DOUBLE TYPES

ST. BRIGID. Finest strain of semi-double anemones in existence. Brilliant shades of red, pink and blue. **Doz. 60c; 100, \$4.75.**

RANUNCULUS

Half hardy in northern climates, should be planted as early as possible in spring. Early February planting is recommended in climates where there is some light freezes. Where there is no danger of freezing, planting is best done in late fall. Plant 2 inches deep, about 4 inches apart, being sure to plant the bulbs with the "claws" downward. Moisture should not fail during the growing season.

TECOLATE GIANTS. The large double flowers are carried on tall graceful stems, they are unexcelled for cut flowers. Few flowers, so easy to grow, will give such a profusion of bloom for such a small investment, each bulb producing about a dozen flowers over a long period.

TOP SIZE BULBS—Not to be confused with 2nd and 3rd size bulbs so often offered at bargain prices.

MIXED. Every conceivable shade of yellow, pink, orange and scarlet to the deepest red. **Doz. 60c; 100, \$5.00**

LILIES

Lily bulbs are available about the middle of October, with the exception of the Auratums which are not ready until December. Please state on your order when you want your bulbs shipped.
